

Exercise #3

Playing with Boxes

1. Open the file `cssclass.css` in Notepad if it is not open already. As you make changes, do only one or two at a time, then save the CSS and refresh the HTML page in the browser. That way, if you do not like the change, you can return it to the original.

2. Change the borders on your divs. Change the width, style, and color on each one.

3. Use the `border-right`, `left`, `top`, and `bottom` to give your divs different borders in a single div.
