

## Exercise #4

### Fix the Footer

1. During this entire class, hasn't the footer been bothering you? Change it! Use one or several of the properties you've learned in class to make that footer better.
2. Use some of the CSS properties you've learned in this last segment to make this page more attractive to you. Consider the padding, text properties, font properties, links, and images.
3. Use the border-right, left, top, and bottom to give your divs different borders in a single div.
