

## CybraryN™ Software

**Libraries**

**Schools**

**Corporations**

### Features

#### Desktop Security

- Prevent saving and opening files on unapproved disks.
- Prevent running of unapproved applications or system utilities.
- Disable function keys, Windows® start bar, and access to MS-DOS®.

#### Patron Authentication

- Communicate directly with your Automated Library System, giving you the ability to manage all your computer resources from one system.
- CybraryN™ software supports all major Integrated Library System Vendors.
- CybraryN™ software authenticates against most major database formats.

#### Time Control

- Set time limits for groups of computers based on the library's policies governing public access privileges.
- Prevent the same user from logging in twice on any computer.
- Automatically extend a user's time if there are other computers not currently being used.

#### Reporting

- Standard reports from CybraryN™ software include: Application Usage, Computer Usage, Patron Usage, Peak Usage, Busiest Day, Internet Usage (requires CybrarySite™ software).

#### Requirements

- Windows® 98/NT/2000/XP compatible computer.

CybraryN™ software is the core offering in the Computers By Design, Inc. robust line of public access computers software solutions. CybraryN™ software can be configured as a Windows® desktop replacement or run using our interface technology. User authentication is achieved through seamless integration with all major databases and library automation software. Users can simply walk up to one of the facility's CybraryN™ software computers and login using a library card or other forms of identification. CybraryN™ software also monitors the amount of time each user has spent on the computers, provides desktop security and allows you to create statistical reports on usage.

### Benefits

- Takes staff away from the menial tasks associated with managing public access computers.
- Reporting features provide accurate data for reports and budget proposals.
- Provides a more efficient distribution of limited computer resources.
- Automatically enforces your rules on governing session length and frequency of patron computers use.

### Authenticating Systems

Innovative • Dynix • Sirsi • TLC • Gaylord/Polaris • VTLs • Follett • 3M • Oracle  
Sybase • MS®-SQL • Carl • DRA • Athena • Sagebrush • Galaxy
