

Desktop Imaging and Cloning

Library Pricing: \$24.95/PC

Deep Freeze instantly protects and preserves baseline computer configurations. No matter what changes a user makes to a workstation, simply restart to eradicate all changes and reset the computer to its original state - right down to the last byte. Expensive computer assets are kept running at 100% capacity and technical support time is reduced or eliminated completely. The result is consistent trouble-free computing on a truly protected and parallel network, completely free of harmful viruses and unwanted programs.

While Deep Freeze provides bulletproof protection, its non-restrictive approach also improves user productivity and satisfaction. Placing no restrictions on a user's ability to access all system resources, users avoid the frustration of downtime due to software conflicts, operating system corruption, virus attacks, and many other problems. Users are always assured of computers that are consistently operable and available.

Deep Freeze is currently available in two editions for Windows, each with different features and capabilities to suit the needs of any environment... [Mac OS X](#) and [Windows Server](#) editions are available and we are currently gathering market interest in a [Linux](#) edition.

Deep Freeze Standard is changing the way IT Professionals protect small multi-user environments. Simple, robust, and cost effective Deep Freeze Standard is ideal for computing environments with 10 or less workstations.

- Guarantees 100% workstation recovery on restart
- Provides password protection and complete security
- Protects multiple hard drives and partitions
- Protects CMOS
- Protects master boot record
- Supports multiple hard drives and partitions
- Supports multi-boot environments
- Compatible with Fast User Switching
- Supports SCSI, ATA, SATA, and IDE hard drives
- Offers single install for Windows 95, 98, ME, 2000, XP
- Compatible with FAT, FAT32, NTFS, basic and dynamic disks
- Offers silent install option for rapid network deployment
- Provides option to deploy on multiple workstations as part of a master image

Norton Ghost 10.0 (Retail: \$69.99/PC)

Key Features

- Backs up everything on your computer - digital music, photos, financial documents, applications, settings, operating system, etc. - in one easy step.
- Recovers your system and data even when you can't restart your operating system.
- Makes incremental backups to maximize space and save time.
- Makes backups on the fly, without restarting your system.
- Backs up to almost any media, including CDR/RW and DVD+-R/RW drives, USB and FireWire® (IEEE 1394) devices, and Iomega® Zip® and Jaz® drives.

New Features

- Automatically creates an initial backup schedule based on your computer's configuration.
- Automatically detects storage devices, analyzes your system, and offers "best practice" backup advice during installation.
- Automatically monitors and optimizes backup disk space.
- Triggers backups on key events, like new program installations or user logins.
- Creates new backups on demand with One Button "Back Up Now".
- Encrypts backups to help keep them secure.
- Task-based interface simplifies management and monitoring.
- Displays all scheduled backups - plus the degree of backup protection for each drive on your computer - in one convenient view.
- One-step setup wizard makes installation and configuration quick and easy.
- Begins backing up to Maxtor external drives by simply pressing the Maxtor OneTouch™ button.

Symantec LiveState™ Recovery Desktop 3.0 (\$392/5-computer pack)

Business Packs provide comprehensive system recovery and backup. Create an exact image of a hard drive's contents and keep the image up to date with incremental backups. When disaster strikes, quickly restore individual files, selected folders, or the entire drive. Schedule or choose event-driven backups to help keep your valuable data safe.

Business Packs are available for 5, 10, or 25 users.
