

## Organize Your Database & Server Information

When you start a new project, I recommend naming everything in lowercase and naming it all in advance. This will keep it clear in your head as you work with the file names, field names, variable names, etc. It can become confusing without a reference to clear your head.

**Instructions:** Use this page for reference during the class. In addition, use it as an example of the information you will need handy and the organization you will employ when creating your own online database.

FTP host address:	ftp://phpclass.infopeople.org
User name:	phpclass
Password:	infopeople
Viewable URL:	http://phpclass.infopeople.org/yourname/file.php
Database file name:	obituaries.sql
Table name:	people
Field names:	firstname, middlename, lastname, maidenname, birthcity, birthstate, deathcity, deathstate, newspaper, newsdate, newsyear
HTML search page file name:	search.html
PHP process file name:	search.php
HTML form fields:	anyname (for firstname, middlename, lastname, maidenname), deathcity (for deathcity), newsyear1 AND newsyear2 (for newsyear)
