Izabela Cieszynski:Whoever picked the music did a fantastic job.

Infopeople Project:Thank you

Gayle Gunderson:our local channel (TV) plays this music, too

Infopeople Project:It's from Breezy Internet Radio

Infopeople Project:If you are hearing an echo, make sure you only have one session open.

patricia polacca:Hi...Trish Polacca from Tuba City Public Library, Tuba City AZ

Robyn Godfrey:what's the twitter hashtag for this webinar?

Infopeople Project:#ifpwebinars

Tonya Boltz:I remember using the actually floppy discs the bigger ones

Pamela:Pamela from Williams Baptist College in Walnut Ridge, Arkansas

Paul:5 1/4

Nick B.:commodore 64!

Robyn Godfrey:Thnx!

Kim Taylor:It's frustrating how fast some technology changes!

Melissa H:My parents still own their Apple IIe from the early 80s!

Robin Hartman:We used to have to boot up the computer with one of these!

Stacy Dzbenski:one of my colleague still uses his Apple 2e

kershner:Computer punch cards are even more ancient!

Mary Augugliaro:Robyn it's #ifpwebinars

Mel Lightbody:Cocoiro pens Wow!

Gayle Gunderson:how about microfiche! (we just weeded in that area)

Aisha CG:that's the only way i can use microsoft software successfully. Love parallels

eappleton:fridge

Paul:Las Vegas here

Don Hilliard:Big concerns re privacy and security

High Point Public Library:Disruptive is not always bad, right?

Pamela:I noticed that banking has changed 59% by Internet. Yes, indeed. My bank has closed numerous branches and now has one routing number for the entire state rather than branch routing numbers.

Nick B.:The only constant is change I suppose

Infopeople Project:At CES we saw refridorator that kept inventory of what is in it and can update your shopping list on your phone.

Robyn Godfrey:I love my Nest.

Melissa Geist:My NEST has saved us money over the winter!

Kim Taylor:What is NEST?

Kim Taylor:n/m

Maria Sunio (RCLS):What about using RING for remote desk coverage?

Michael Claytor:https://nest.com/thermostat/meet-nest-thermostat/

Kim Taylor:thank you for the link

Darla Wegener:I need this!

Mel Lightbody:Love my Tile.

eappleton:how detailed is the map

Deborah H:TrackR does the same thing -- love mine!

Aisha CG:I need that for my phone lol instead of the keys

Infopeople Project:https://www.thetileapp.com/?gclid=CL6ZkbTy2coCFYhffgodlD0Jxg&gclsrc=aw.ds&p

Kim Taylor:I love my Amazon Echo/Alexa!

Aisha CG:im sure that is next

Aisha CG:lol

Elizabeth Gray:Have to be connected to wireless or have batteries for it to work?

Kim Taylor:I remember when we bought a "clapper" device for my mom's keys

Maria Sunio (RCLS):https://ring.com/

Kim Taylor:Will all of these links be available in the archive?

Katelyn:I heard they are putting the RFID in players shoulder pads

Aisha CG:man making your fantasy team is going to get insane

Infopeople Project:We will archive the chat on the description page after the event

Mary Augugliaro:The chat transcript will be included with the archive

Kim Taylor:Thank you!

Paul:better steaks?

Dianne Ludwig:Who wouldn't love to get a text every time a cow poops?

Kim Taylor:lol

Alexis:lol

Tonya Boltz:My daughter and son in law are cattle farmers, I could see them using this

Susan - Oelwein:Will look into this...for heat detection and calving...no more getting up at 2AM to see if a cow is calving. Woot, woot

Paul:... similar to the solar powered smart road technology in the making.

Kim Taylor:I can see this helpful for my goats.

Deb:iBeacons are great for conferences to send out notifications and alerts. Capira uses this tech

Robin Hartman:I saw something like this at the ALA in SF last year.

Infopeople Project:http://www.ibeacon.com/

Kim Taylor:I need an iBeacon for my old blind dog, as she's always roaming around on the farm

eappleton:thats almost creepy

Stacy Dzbenski:kind of creepy

Stephanie Beverage:creepy and cool at the same time

Maria Sunio (RCLS):You have to opt into the service to get the iBeacon alerts, though, so not that creepy.

eappleton:better than QR codes. A lot of museums tried those and they never caught on

Kim Taylor:creepy when it's abused, but cool when it helps locate lost air breathers/products, etc

Maria Sunio (RCLS):Paolo Melillo from OCPL (FL) presented an informative presentaton at ALA 2015 using BluuBeam.

eappleton:we don't even use rfid

Gayle Gunderson:nor do we

Robyn Godfrey:We were designing a literary walking tour - I could see iBeacon working for that.

Deborah H:People are expecting wifi that's easy to connect to and speedy internet speeds

Robin Hartman:CLIO is an app that you can use to learn about historical landmarks in the area.

Maria Sunio (RCLS):Someone suggested using Bluubeam for outreach, e.g., farmer's market., to publicize library services.

Karoline:We have Meraki wireless with beaconing and advertise our library programs with beacons

Robyn Godfrey:Control the heat in a 100 year-old Carnegie Library??? AWESOME!

eappleton:thats a great idea mario

Elizabeth Gray:Geo caching at the library

Maria Sunio (RCLS):I think Paolo was going to at putting together a scavenger hunt with Bluubeam.

Stephanie Beverage:I saw Capira at ALA, and Somersst County NJ is doing some good readers advisory work with the Beacons

Stephanie Beverage:The can push recommendations to the app

Stephanie Beverage:I meant they

Kathy Faubion:The last tech conferece I went to , they said the best thing we could do in a new library would be to have enough plugs.

Kathy Faubion:sorry outlets for plug

Nick B.:We're doing a neverland themed literary treasure hunt. It would be awesome to when they reach a certain point to have Peter Pan send you a good job or something.

Maria Sunio (RCLS):Has anyone else gotten a Facebook offer to their library page for a free beacon?

Tonya Boltz:we most def need to have more elec outlets

Gayle Gunderson:we've a brand new building and can't control HVAC!

Nick B.:Otter box baby

Alexis:Otter box cases are amazing!

eappleton:i have dropped my iphone so many times and never broken it

Dianne Ludwig:Can't see slides, just black :(

Nick B.:2 years with my 5 and *knocks on wood* no damages yet

Paul:<-- born again luddite

Mary Augugliaro:Dianne, I'm sorry to hear that. You can get a copy of the slides here
https://infopeople.org/civicrm/event/info?reset=1&id=549

Deborah H:Kathy F, I think we should go even further and have usb ports available for charging.

eappleton:what do you think of mobile first?

Tonya Boltz:we are just getting started on making a charging statiion

Dianne Ludwig:Library vendors make troublesome products. Frequently.

Kathy Faubion:we have a charging station, but only the 1

Robin Hartman:So many vendor apps are not so good. I don't promote them unless they are reliable and intuitive.

Meredith:USB charging ports would be great! The airport has them

Michele:Saw a phone charging station at Nordstrom's last weekend. YOu checked it in with an employee like a coat check and shopped while it charged in the tower.

Stacy Dzbenski:I wouldn't want to be responsible for my patrons phones if they left them at a changing station, but I like the idea

Stacy Dzbenski:charging*

Melissa H:I had a mobile charging station when we were at an outdoor community event. People came over, but I agree with Stacy-- people would try to walk away, and I don't want to babysit anyone's

devices.

Maria Sunio (RCLS):Has anyone used the tabletop charging stations at Starbucks?

Jerry:Patrons/students comfortable using desktop computers get frustrated with revamped sites designed for mobile devices. Are desktop computers moving towards extincition?

Diane Cowen:I heard about a kid who wrote an entire school paper on his phone.

Michele:Yes, the circle thing chargers are interesting

Stephanie Beverage:We have put in power towers in seating areas so peoople can charge their devices

Alexis:all of our tables and chairs w/ fold out desk things have plugs for charging and i believe they have usb ports too.

Stephanie Beverage:And we look for furniture that has power capacity

Elizabeth Gray:what technology exists for tracking laptops checked out to patrons? In our rural area, we want to provide a mifi and a laptop but need to be able to get them back!

Dianne Ludwig:i shudder to think of trying to do taxes on my phone, all those FORMS, ugh.

Stephanie Beverage:Bibliotheca has a device RFID tag for laptops

Elizabeth Gray:We don't have RFID :(Can we still use?

Kim Rutter:who pays for the electricity for the charging station instead of the pay phone?

Stephanie Beverage:OUr city has a BYOD polciy for phones and other devices

Deborah H:Elizabeth G, look into Meraki for tracking mobile devices. We just installed on our iPads because kids kept setting passwords on them and we'd have to restore to factory default.

Elizabeth Gray:Thank you Deborah H.!

Stephanie Beverage:I think you would have to have some RFID pads or readers to use any tag

Ricardo Gutierrez:We at riverside public library will be soon getting 10g

Stephanie Beverage:Same here

Stephanie Beverage:In Huntington Beach

Linda:We are going from 10MB to 100MB this year. Looking forward to the increase!

Stephanie Beverage:OUr city has electric car pay stations

Nick B.:You have to pay for those things? Yikes.

Elizabeth:How many libraries have wireless printing capability?

Michele:Our county does the car charging pay stations too. They installed them at all County buildings including the libraries

Alexis:we do elizabeth

Kathy Faubion:we have it- st.mary's co library, md

Nick B.:Ours has wireless, though it's not very streamlined

Michele:Yes, wireless printing is very popular

Katelyn:We have wireless printing at Sacramento Public

Dianne Ludwig:we have wireless printing

Deborah H:Elizabeth, we use PrinterOn for wireless printing

Ricardo Gutierrez:Thats How bag looks like

eappleton:we just got wireless printing, we are very excited

Kathy Faubion:We use PrinterOn too

Paul:no emergency charger?

Meredith:Yep, wireless printing in Charlotte, NC

Ricardo Gutierrez:Love my gagets

Marie:Wireless printing here at Allen County Public Library, Indiana

Nick B.:Oooo and milk chocolate with cornflakes!

eappleton:great lip balm

Stephanie Beverage:Working on wireless printing in Huntington Beach. Have some tech issues to resolve...

Kim Taylor:wireless printing here in Clark, SD

Stephen:Chromebook and Android wedding coming soon...

Deborah H:I can't remember the last time I used a camera.

Stephen:MINECRAFT!!! W00T!

eappleton:every kid in our library is obsessed with minecraft

Kathy Faubion:we do a minecraft program pretty much weekly. kids love it

Jody:35

Nick B.:Baldur's Gate Enhanced Edition. Nice.

Alexis:We have minecraft progams...the kids LOVE them!

Stephen:#candycrush is why

Michele:we do afterschool gaming in our system

Jody:Did you see a library (can't remember which one) is offering Minecraft for Seniors?

Kim Rutter:yes! I love the idea of minecraft for grandparents!

Alexis:that sounds awesome

Stephanie Beverage:STEAM does really cool big games - my husband is an addict

Paul:Age of Mythology... hmmm brb...

Michele:And family game nights- but those are physical games

Aubrey:We tried putting steam on the YA computers. It didn't get a lot of use, sadly

Stephen:other dude has a disposable camera

eappleton:is this like google cardboard stuff?

Michele:Exploding Kittens has a new mobile phone game that you play with friends. You need to be near them- like the old palm pilot beaming.

Stephen:POKEMON GO FTW!

Deborah H:I tried Ingress and it was addicting. Decided I needed to stop.

Stephanie Beverage:Gaming is very social

Elizabeth Gray:We want to do a program on google cardboard stuff. @ eappleton

Alexis:some of my coworkers did something like Ingress (maybe it was Ingress)...not sure if they still do

Mel Lightbody:yep cut the cable in 2009

Stephanie Beverage:Love my Fire stick

Stephanie Beverage:Wayz is great for directions and traffic

Kris Amaral:The new APPLE Car is being developed now

Melissa H:I'd like to do something with Google Cardboard, just not sure how to go about it.

Melissa H:The NYT VR app is amazing.

Nick B.:And for avoiding those pesky speed traps

eappleton:Melissa, we are talking about doing something for teen tech week with google cardboard

Kris Amaral:http://www.digitaltrends.com/cars/apple-car-news/

Melissa H:Our teens played a little, but I'd like something for adults (my deparment)

pollyalida:Melissa - Half Hollow Hills library on long island (ny) did a program on google cardboard

Stephanie Beverage:I had someone come in and wanted to plug in a curling iron

Melissa H:Thank you polly!

Tamiko Welch:Fit Bits

Tonya Boltz:I currently wear a Dexcom that tells me what my blood sugar is 24/7

Ricardo Gutierrez:Got one love it

Dianne Ludwig:Wearable tech seems to have a long way to go.

Michele:medical wearables are amazing

Stacy Dzbenski:just researched somethign called a Dot Watch that links via bluetooth to a device and it will translate what is on the screen into Braille on the watch

Deborah H:Tonya, do you charge the Dexcom like a phone? Or does it use a battery?

Tonya Boltz:charge like a phone about every 3 days

Mel Lightbody:I thought Google glass was a fail. Interesting.

Tonya Boltz:I cannot imagine being with out truely life saving

eappleton:there are a lot on amazon for much cheaper than 20 bucks

Nick B.:The Oculus is going places too.

pollyalida:watch out for vertigo w google cardboard! Fun but really makes me dizzy.

Melissa H:That Dexcom sounds like amazing tech. I'll tell our consumer health librarians about it.

Ricardo Gutierrez:gold apple watch $17,000.00

Deborah H:Yes, pollyalida, I agree. Cardboard made me nauseated after only a minute or two. lol

Nick B.:smart garment...smartments! (patent pending)

Paul:smart diapers?

chris snyder:oh, pooh

eappleton:there is a university that is requiring all students wear fitbits.

Tonya Boltz:Dexcom is AMAZING

Aubrey:....not smartypants?

Michele:Hmm, the homeless will need to charge medical devices if they become ubiquitous

Deb:we are going to incorporate a walking challenge at conference

Joanna Kerr:have to get back to the reference desk...

Maria Sunio (RCLS):The dark side of wearable health tech is Logan's Run: Renew! Renew!

Kathy Faubion:johnny cab

kershner:self driving cars would need the technology for road conditions - ICE!

Kim Taylor:we'll need smart roads to go with smart cars

Susan - Oelwein:I love the idea of implementing fingerprint reading instead of library cards for checking out

Nick B.:Library Bot 3000

Alexis:that would be a great idea Susan

Robert:There goes all of our privacy

Elizabeth Gray:tracking technology for loanign out technology

Meredith:How would fingerprint reading deal with checking out materials for family members?

Deb:exactly, using whatever people have they can use - fitbit, health app on phone, etc.

Paul:Any cybernetic implant technology for direct neural interface for library database interactions?

Stephanie Beverage:I heard about a University that is trying to track students so they can determine what makes for the best educational experience

Stephanie Beverage:It is a bit creepy

Susan - Oelwein:At our library, we do not have family cards, just individual cards even for small children

Deborah H:Are there free options on Steam? Or does one need to have an account and credit card on file?

ellie lease:proxy

Meredith:We don't have family cards, either, but we're constantly dealing with "well my wife put this on hold..."

Nick B.:There are a lot of free "pay as you go" kind of games on Steam, but I do believe you have to at least set up an account to log in.

Aubrey:deborah - there are some free to play games

Deborah H:Thanks, Nick and Aubrey!

Linda:At our library, patrons can note on their account if family members can pick up their reserve items.

Alexis:Meredith we have that too. We only let family members checkout if their name is on the account

Susan - Oelwein:Meredith--they can still have a library card to use in such situations as picking up an item for someone else...just gives them two options for check out

Tonya Boltz:this was great. thank you

Leizel:Thank you!

Deborah H:Thank you, David. Great info here!

Gail:Thank you!!!

kershner:Thanks!

Parsons:Thanks David!!

Gayle Gunderson:Thank you very much

pollyalida:thanks - great info

Nick B.:Thank you good sir!

Susan - Oelwein:And, I believe you can "register" more than one fingerprint for a "number"

Kate:Thank you!

Infopeople Project:https://www.surveymonkey.com/r/T3YC8YZ

Kim Taylor:Thank you for all of the information.

Gail Marsh:Thanks!

Jeff T., Contra Costa County:Thank you very much!

Michele Fenton:Thanks! Great presentation! I learned alot!

Aubrey:thanks :)

Alexis:Thank you David

Andrew:Thanx!

Cynthia:Thank you!

Nick B.:Implant right behind the eyeball

Angela:THANKS!

Sarah:Thanks, really interesting

Mary:Thank you!

Linda:I'm almost 62 years old and this has blown me away. Did not realize all that is out there.

Maria Sunio (RCLS):Thanks!

Linda:Thanks

kershner:I missed the screen wiith survey!

Darla Wegener:Thanks

kershner:Please put uf survey address again!

Marie:Kershner : it's linked up in the chat too
